

PowerTab™ Energy Monitor Model on Display in Millennium Water Presentation Centre

October 15th, 2007. Vancouver, BC – A model of the PowerTab, an in-home energy monitor from Energy Aware Technology Inc., is now on display in the Millennium Water Presentation Centre, the future home of the Vancouver 2010 Athletes' Olympic Village.

The PowerTab helps homeowners discover that living sustainability can start as easily as turning off a light. This easy to use device promotes energy awareness by telling consumers how much power their home uses, and encourages sustainability through the reduction of energy waste.

Energy Aware's goal in developing the PowerTab is to create a product that will raise energy awareness and reduce energy waste without requiring significant lifestyle changes. Through education and real-time feedback on energy consumption, the PowerTab allows homeowners to adjust their habits easily and effectively.

"The PowerTab is designed to empower and educate the home owner" says company President Janice Cheam. "The design of the product is very user-friendly, helping people save a significant amount of money each year. It is good for the user and it is good for the environment".

The PowerTab was designed with the help of OneOak Design Inc. A model of the product can be seen at the Millennium Water Presentation Centre in False Creek (www.millenniumwater.com).
